

Leaf-free Streets

For Clean Waters

DID YOU KNOW

Leaves left in the street every fall can harm our waters

When it rains, water runs through street leaves forming a "leaf tea" rich in phosphorous that drains to our lakes and rivers through storm sewers. Phosphorous can fuel toxic algae blooms harmful to animals and people.

- More than 50% of the annual amount of phosphorous in urban stormwater can come from leaves in the street.
- In the fall, timely removal of street leaf litter can reduce the amount of phosphorous in urban stormwater by 80% compared to no leaf removal.

Join us in keeping streets leaf-free this fall.

It's easy! Before the rain...

- 1. Safely remove leaves from the street in front of your home.
- 2. Follow your community's leaf collection guidelines or recycle leaves on your property.

Sign up for Leaf-free Streets Rain Alerts this fall!

Alerts will be sent (via text or email) 1-2 days before a rain event reminding you when it's time to remove street leaves.
